Questions & Answers About core java interview questions for 6 years experience

No	Question	Answer
1	What are the key differences between HashMap and ConcurrentHashMap in Java?	HashMap is not thread-safe and can lead to inconsistent data in concurrent environments, whereas ConcurrentHashMap is designed for concurrent use, allowing safe access and modification by multiple threads without external synchronization.
2	Explain the concept of Java Memory Model and how it affects multithreaded programming.	The Java Memory Model defines how threads interact through memory and specifies rules for visibility and ordering of variables between threads. It ensures thread safety by managing read/write operations to variables, preventing issues like stale data and race conditions.

3	How do you implement a Singleton design pattern in Java ensuring thread safety?	One common way is to use the 'double-checked locking' with a volatile instance variable, ensuring that the Singleton instance is created lazily and safely in a multithreaded environment.
4	What improvements did Java 8 introduce in handling collections?	Java 8 introduced Stream API, allowing for declarative processing of collections, along with lambda expressions that enable concise and functional-style operations like map, filter, and reduce.
5	Describe how garbage collection works in Java and how you can optimize it.	Java's garbage collector automatically frees memory by removing objects no longer referenced. Optimization can be done by tuning JVM parameters, selecting appropriate GC algorithms, and writing memory-efficient code to minimize GC overhead.
6	What is the difference between checked and unchecked exceptions in Java?	Checked exceptions are checked at compile-time and must be either caught or declared to be thrown, while unchecked exceptions (RuntimeExceptions) are not checked at compile-time and usually indicate programming errors.

7	How does the 'final' keyword affect variable, method, and class declarations in Java?	For variables, 'final' makes them constants, disallowing reassignment; for methods, it prevents overriding; and for classes, it prevents inheritance.
8	Can you explain the role of ClassLoader in Java?	ClassLoader is responsible for dynamically loading Java classes into the JVM at runtime. It follows a delegation model to load classes, enabling modular and dynamic application behavior.
9	What are the different types of thread pools available in Java and when would you use them?	Java provides fixed thread pool, cached thread pool, single thread pool, and scheduled thread pool. Choice depends on workload characteristics: fixed for predictable load, cached for short-lived asynchronous tasks, single for sequential tasks, and scheduled for periodic executions.
10	Explain the concept of immutability in Java and its benefits.	An immutable object's state cannot change after creation. Benefits include thread safety, simplicity, and prevention of unexpected side effects, making them ideal for concurrent applications.

1 1	What are the key differences between Java 8 and Java 11?	Java 8 introduced lambda expressions, the Stream API, and the new Date and Time API. Java 11, on the other hand, introduced the new HTTP Client API, the new Eclipse Temurin as the default JDK, and the removal of the Java EE and CORBA modules.
1 2	How does the Java Virtual Machine (JVM) work?	The JVM provides a runtime environment for executing Java bytecode. It includes a class loader for loading Java classes, a bytecode verifier for ensuring the correctness of the bytecode, and an interpreter or JIT compiler for executing the bytecode.
1 3	Explain the concept of multithreading in Java.	Multithreading in Java allows multiple threads to execute concurrently. This can significantly improve the performance of Java applications. However, multithreading can also introduce complexity and potential issues like race conditions and deadlocks.
1 4	What are the different types of exceptions in Java?	The different types of exceptions in Java include checked exceptions, unchecked exceptions, and runtime exceptions. Checked exceptions are exceptions that must be handled at compile time, while unchecked exceptions and runtime exceptions are exceptions that can be handled at runtime.

1 5	How do you handle memory leaks in Java?	Memory leaks in Java can be handled by using tools like VisualVM, Eclipse Memory Analyzer, and JProfiler. These tools can help identify memory leaks by analyzing heap dumps and providing detailed information about memory usage.
1 6	What is the difference between an interface and an abstract class?	An interface is a collection of abstract methods that define a contract for classes to implement. An abstract class, on the other hand, is a class that cannot be instantiated and may contain both abstract and concrete methods.
1 7	How does garbage collection work in Java?	Garbage collection in Java is the process of automatically freeing up memory by removing objects that are no longer in use. The JVM uses different types of garbage collectors, including the Serial Garbage Collector, the Parallel Garbage Collector, and the G1 Garbage Collector.
1 8	What are the best practices for writing efficient Java code?	Best practices for writing efficient Java code include using appropriate data structures, optimizing loops, minimizing object creation, and using code refactoring to improve maintainability and readability.

19	How do you optimize the performance of a Java application?	Optimizing the performance of a Java application involves using profiling tools to identify performance bottlenecks, optimizing algorithms and data structures, minimizing object creation, and using efficient I/O operations.
20	What are the key features of Java 17?	The key features of Java 17 include the new Pattern Matching for switch expressions and statements, the new Sealed Classes and Interfaces, the new Enhanced Pseudo-Random Number Generators, and the new Foreign Function and Memory API.
