Questions & Answers About lesson 1 position and motion answer key

No	Question	Answer
1	What is the difference between distance and displacement?	Distance is the total length of the path traveled by an object regardless of direction, and it is a scalar quantity. Displacement is the shortest straight-line distance from the initial to the final position of the object and it is a vector quantity.

2	Why is a reference point important in defining position?	A reference point serves as a fixed location used to determine the position of an object. Without a reference point, the position cannot be precisely described since position is relative.
3	How do you calculate average speed from given data?	Average speed is calculated by dividing the total distance traveled by the total time taken. It is a scalar quantity and does not consider direction.
4	Explain why velocity is considered a vector quantity.	Velocity includes both the speed of the object and the direction of its motion, making it a vector quantity.
5	What does the term 'motion' refer to in physics?	Motion refers to the change in the position of an object with respect to time and a reference point.
6	How is instantaneous speed different from average speed?	Instantaneous speed is the speed of an object at a specific moment in time, while average speed is the total distance divided by total time over a period.
7	Can an object have zero displacement but non-zero distance traveled? Explain.	Yes, if an object returns to its starting point after moving around, its displacement is zero because the initial and final positions are the same, but the distance traveled can be non-zero.
8	What role do units play in describing position and motion?	Units provide standard measures for quantities like distance, time, and speed, ensuring clarity and consistency in communication and calculations.
9	What is the difference between speed and velocity?	Speed is a scalar quantity that measures how fast an object is moving, while velocity is a vector quantity that includes both the speed and the direction of the object's motion.
