Questions & Answers About multiple choice questions and answers from guyton quizlet

N o	Question	Answer
1	What is the primary role of the sodium-potassium pump in cellular physiology?	To maintain the resting membrane potential by actively transporting sodium out of the cell and potassium into the cell.
2	According to Guyton, which organ is the main regulator of blood volume?	The kidneys.
3	In the context of Guyton's physiology, what causes the plateau phase in cardiac action potentials?	The balance between calcium influx and potassium efflux.
4	What physiological mechanism is responsible for autoregulation of renal blood flow?	The myogenic response and tubuloglomerular feedback.
5	Which hormone increases water reabsorption in the collecting ducts of the kidney as described in Guyton's textbook?	Antidiuretic hormone (ADH).
6	How does Guyton describe the interaction between cardiac output and peripheral resistance in regulating arterial blood pressure?	Arterial blood pressure is determined by the product of cardiac output and total peripheral resistance.

7	What is the significance of the Frank-Starling law in cardiac physiology according to Guyton?	It describes the relationship where increased ventricular filling leads to increased stroke volume.
8	What is the primary function of the cardiovascular system as described in Guyton's textbooks?	The primary function of the cardiovascular system is to deliver oxygen and nutrients to the body's tissues and remove waste products, maintaining homeostasis.
9	How does the autonomic nervous system regulate heart rate according to Guyton's principles?	The autonomic nervous system regulates heart rate through the sympathetic and parasympathetic divisions. Sympathetic stimulation increases heart rate, while parasympathetic stimulation decreases it.
10	What is the role of the renin-angiotensin-aldosterone system (RAAS) in blood pressure regulation as explained in Guyton's texts?	The RAAS plays a crucial role in blood pressure regulation by controlling blood volume and vascular resistance. Renin, released by the kidneys, converts angiotensinogen to angiotensin I, which is then converted to angiotensin II, a potent vasoconstrictor.
11	How does the respiratory system contribute to acid-base balance according to Guyton's principles?	The respiratory system contributes to acid-base balance by regulating the concentration of carbon dioxide (CO ₂) in the blood. By altering the rate and depth of breathing, the body can adjust the levels of CO ₂ , which in turn affects the pH of the blood.
12	What is the significance of the Frank-Starling mechanism in cardiac function as described in Guyton's textbooks?	The Frank-Starling mechanism explains how the heart's pumping ability is influenced by the volume of blood in the ventricles at the end of diastole. An increase in ventricular filling leads to a more forceful contraction, ensuring that the heart can adapt to changes in venous return.

1 3	How does the body regulate blood glucose levels according to Guyton's principles?	The body regulates blood glucose levels through the actions of insulin and glucagon. Insulin, released by the pancreas in response to high blood glucose, promotes the uptake of glucose by cells. Glucagon, released in response to low blood glucose, stimulates the release of glucose from the liver.
1 4	What is the role of the baroreceptor reflex in maintaining blood pressure as explained in Guyton's texts?	The baroreceptor reflex helps maintain blood pressure by detecting changes in blood pressure and adjusting heart rate and vascular resistance accordingly. When blood pressure rises, the baroreceptors send signals to the brainstem to decrease heart rate and vasodilate, lowering blood pressure.
1 5	How does the body regulate body temperature according to Guyton's principles?	The body regulates body temperature through a combination of physiological and behavioral mechanisms. The hypothalamus acts as the body's thermostat, integrating signals from temperature receptors and initiating responses such as sweating, shivering, and vasodilation or vasoconstriction.
1 6	What is the significance of the chemoreceptor reflex in respiratory control as described in Guyton's textbooks?	The chemoreceptor reflex plays a crucial role in respiratory control by detecting changes in the levels of oxygen, carbon dioxide, and pH in the blood. When these levels deviate from normal, the chemoreceptors send signals to the respiratory centers in the brainstem to adjust the rate and depth of breathing.
1 7	How does the body regulate fluid and electrolyte balance according to Guyton's principles?	The body regulates fluid and electrolyte balance through the actions of hormones such as aldosterone, antidiuretic hormone (ADH), and atrial natriuretic peptide (ANP). These hormones control the reabsorption and excretion of water and electrolytes by the kidneys, ensuring that fluid and electrolyte levels remain within narrow limits.
