1 1	What are the major tectonic plates and their locations?	The major tectonic plates include the Pacific Plate, North American Plate, Eurasian Plate, African Plate, Antarctic Plate, Indo-Australian Plate, and South American Plate. These plates are distributed across the Earth's surface and interact at their boundaries.
1 2	What is the difference between a divergent boundary and a convergent boundary?	A divergent boundary occurs when two tectonic plates move apart, allowing magma to rise and create new crust. A convergent boundary occurs when two tectonic plates move towards each other, resulting in the formation of mountain ranges, volcanic activity, and deep ocean trenches.
1 3	What are the geological features associated with a transform boundary?	Transform boundaries are characterized by horizontal movement of tectonic plates, often resulting in earthquakes. These boundaries do not involve the creation or destruction of crust, but rather the sliding of plates past one another.
1 4	How do tectonic plates contribute to the formation of mountain ranges?	Tectonic plates contribute to the formation of mountain ranges through the process of orogeny, which occurs at convergent boundaries. As two plates collide, the crust is pushed upwards, forming mountain ranges over millions of years.

1 5	What is the role of convection currents in the movement of tectonic plates?	Convection currents in the mantle drive the movement of tectonic plates. These currents transfer heat from the Earth's interior to the surface, causing the plates to move and interact at their boundaries.
1 6	How do tectonic plates influence volcanic activity?	Tectonic plates influence volcanic activity by creating conditions that allow magma to rise to the surface. At divergent boundaries, magma rises to create new crust, while at convergent boundaries, the subduction of one plate beneath another can lead to volcanic eruptions.
1 7	What are the different types of plate boundaries and their characteristics?	The three main types of plate boundaries are divergent boundaries, convergent boundaries, and transform boundaries. Divergent boundaries involve the movement of plates apart, convergent boundaries involve the collision of plates, and transform boundaries involve the sliding of plates past one another.
