Dedicated to the advancement of geographical knowledge, the society has collected and preserved maps, charts, and documents that illustrate the evolution of geographical understanding through time. Among its many treasures, the Silver Map is uniquely captivating for its artistry and historical significance.

What is the Silver Map?

The Silver Map is a meticulously engraved cartographic piece made from silver, a rare and precious medium that elevates the map from a mere reference to a work of art. Its creation involves exceptional craftsmanship, combining precise geographical representation with ornamental design. The map often depicts significant regions or journeys, celebrating milestones in exploration or commemorating notable expeditions sponsored, documented, or acknowledged by the RGS.

Historical Context and Significance

During the 19th and early 20th centuries, mapping was both a scientific pursuit and a political tool. The Silver Map emerged during a period when the British Empire was at its height, and exploration was intertwined with colonial ambitions, scientific discovery, and global trade. The metal surface is carefully prepared and engraved using specialized tools to etch coastlines, rivers, mountain ranges, and other geographical features. The reflective quality of silver adds depth and elegance, making it not only an informative item but also a decorative piece suitable for display in galleries, libraries, and prestigious institutions.

The Silver Map in Today's Cultural Landscape
