Understanding these concepts is essential for tackling more complex mathematical challenges and building a strong foundation for future learning.

Key Techniques for Multiplying Using Mental Math

Here are some key techniques that can help you multiply numbers efficiently using mental math:

1. **Breaking Down Numbers:** Decompose numbers into more manageable parts. For example, to multiply 23 by 15, you can break it down into $(20 + 3) * (10 + 5)$ and use the distributive property to simplify the calculation.
2. **Using the Commutative Property:** The commutative property of multiplication states that the order of the numbers does not affect the product. This can be useful for simplifying calculations, especially when one of the numbers is easier to multiply.
3. **Leveraging Patterns and Relationships:** Recognize patterns and relationships between numbers to simplify multiplication. For instance, multiplying by 10, 100, or 1000 can be done by simply adding zeros to the end of the other number.

Lesson 28 Answer Key Homework

To help you practice and master the techniques covered in Lesson 28, here is a sample answer key for a typical homework assignment:
