Preparing for the Exam: Resources and Tips

Utilizing textbooks, online resources, and study groups can greatly enhance preparation. Reviewing illustrative financial statements and practicing journal entries can build confidence. Additionally, staying updated with recent changes in accounting standards is helpful since exams often reflect current regulations.

Questions & Answers About intermediate financial accounting exam questions and answers

No	Question	Answer
1	What is the difference between capitalizing an expenditure and expensing it in intermediate financial accounting?	Capitalizing an expenditure means recording it as an asset on the balance sheet, which will be depreciated or amortized over its useful life. Expensing an expenditure means recording it immediately as an expense on the income statement, reducing net income for the period.
2	How is revenue recognized under IFRS 15 in intermediate financial accounting?	Revenue under IFRS 15 is recognized when control of goods or services is transferred to the customer, reflecting the amount the entity expects to be entitled to in exchange for those goods or services.
3	Explain the impairment testing process for long-lived assets.	Impairment testing involves comparing the carrying amount of an asset to its recoverable amount (the higher of fair value less costs to sell and value in use). If the carrying amount exceeds the recoverable amount, an impairment loss is recognized.
4	What are deferred revenues and how are they presented in financial statements?	Deferred revenues are payments received before goods or services are delivered. They are recorded as liabilities on the balance sheet until the revenue is earned and recognized on the income statement.

5	Describe the accounting treatment for leases under IFRS 16.	Under IFRS 16, lessees recognize a right-of-use asset and a lease liability for most leases, measuring both at the present value of lease payments. Lease expenses are recognized through depreciation of the asset and interest on the liability.
6	How are stock dividends accounted for in intermediate financial accounting?	Stock dividends involve issuing additional shares to shareholders proportionally. They are recorded by transferring an amount from retained earnings to paid-in capital, with no change in total equity.
7	What is the difference between accounts payable and notes payable?	Accounts payable are short-term obligations to suppliers for goods and services purchased on credit, typically without interest. Notes payable are formal written promises to pay a certain amount on a specified date, often including interest.
8	What are the key components of a balance sheet?	The key components of a balance sheet are assets, liabilities, and stockholders' equity. Assets represent what the company owns, liabilities represent what the company owes, and stockholders' equity represents the residual interest in the assets after deducting liabilities.
9	How does the matching principle affect the income statement?	The matching principle requires that expenses be recognized in the same period as the revenues they help to generate. This ensures that the income statement accurately reflects the financial performance of the company for a given period.

10	What is the difference between current assets and non-current assets?	Current assets are expected to be converted to cash, sold, or consumed within one year or less, while non-current assets are expected to provide economic benefits over a longer period, typically more than one year.
11	How is the cost of goods sold calculated?	The cost of goods sold (COGS) is calculated by adding the beginning inventory to the cost of goods purchased during the period and then subtracting the ending inventory. This formula is: $\text{COGS} = \text{Beginning Inventory} + \text{Purchases} - \text{Ending Inventory}.$
12	What is the purpose of the statement of cash flows?	The purpose of the statement of cash flows is to provide information about the cash receipts and cash payments of an entity during a period. It helps users understand the entity's liquidity, solvency, and financial flexibility.
13	How does the time value of money affect financial reporting?	The time value of money principle states that money available at the present time is worth more than the same amount in the future due to its potential earning capacity. This principle affects financial reporting by requiring the discounting of future cash flows to their present value.
14	What is the difference between operating activities and investing activities on the statement of cash flows?	Operating activities include the cash effects of transactions that enter into the determination of net income, while investing activities include the purchase and sale of long-term assets and other investments.

1 5	How is the allowance for doubtful accounts calculated?	The allowance for doubtful accounts is typically calculated as a percentage of accounts receivable. This percentage is based on historical data and industry standards, and it represents the estimated amount of accounts receivable that will not be collected.
1 6	What is the purpose of the statement of stockholders' equity?	The purpose of the statement of stockholders' equity is to show the changes in the equity section of the balance sheet during the period. It provides detailed information about the issuance and repurchase of stock, dividends paid, and changes in retained earnings.
1 7	How does the revenue recognition principle apply to long-term contracts?	For long-term contracts, revenue is recognized over the life of the contract based on the percentage of completion method or the completed contract method. The percentage of completion method recognizes revenue proportionate to the work completed, while the completed contract method recognizes revenue only when the contract is completed.
