A chromosome is a structure found in the nucleus of a cell that contains many genes. Chromosomes are made up of DNA and proteins and are responsible for carrying and transmitting genetic information from one generation to the next.
17	What is the process of meiosis?	Meiosis is a type of cell division that results in four genetically unique daughter cells. It is a key process in sexual reproduction, as it ensures that the daughter cells (gametes) have half the number of chromosomes as the parent cell (germ cell). This is important for maintaining the chromosome number from one generation to the next.
18	What is the role of the Golgi apparatus in a cell?	The Golgi apparatus is a network of membranous sacs that is involved in the modification, sorting, and transport of proteins and lipids. It receives proteins and lipids from the ER and modifies them before sending them to their final destinations, such as the cell membrane or other organelles.
