Initially, I used traditional techniques such as slow speech and breathing exercises. However, I noticed that the child was becoming frustrated and disengaged. I decided to incorporate play-based therapy, using games and activities that the child enjoyed. This approach not only made the sessions more enjoyable for the child but also led to significant improvements in their speech fluency.

10	How do you handle a situation where a patient is not making progress as expected?	When a patient is not making progress as expected, I first review the treatment plan to ensure it is appropriate for the patient's needs. I use a variety of technological aids, such as speech recognition software, language learning apps, and telehealth platforms, to enhance the effectiveness of my therapy sessions. I also use telehealth platforms to provide therapy sessions to patients who are unable to attend in-person sessions due to geographical or mobility constraints.

13	What are the latest advancements in speech language pathology that you find most exciting?	One of the most exciting advancements in speech language pathology is the use of artificial intelligence (AI) and machine learning (ML) to develop personalized treatment plans. AI and ML algorithms can analyze large datasets to identify patterns and trends that might not be immediately apparent to human clinicians. This information can be used to tailor treatment plans to the unique needs of each patient, leading to more effective and efficient therapy outcomes. Additionally, the use of virtual reality (VR) and augmented reality (AR) in speech language therapy is also very promising. These technologies can create immersive and interactive environments that simulate real-life situations, helping patients to practice their communication skills in a safe and controlled setting.
